

I am in favor regarding the ARRL proposed 60 meter domestic amateur allocation. The new band would provide the amateur community with a much needed band for domestic communications and emergency traffic could be used without the interference problems from international broadcasters that is so prevalent in the 40 meter band. I also feel that the band should not be subdivided between license classes, but open to amateurs holding a General or higher class license. The first 25 kHz could be set aside for CW operation only, the second 25 kHz for digital modes, and the remaining 100 kHz for phone use.
